Phuel Lightweight Entry Guide

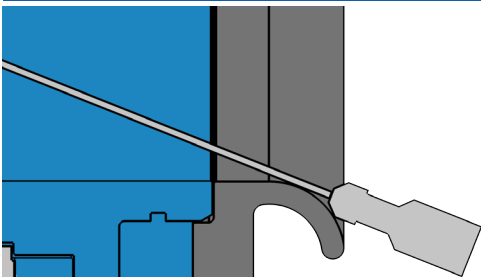

The **Phuel Lightweight Entry Guide** stops tool hangups by removing sharp angles.

Equally useful when the stack is horizontal or vertical, or when new tools are picked up from a horizontal position to be introduced to a vertical stack.

The guide allows easy entry of tools and perforating guns and reduces cable damage by eliminating sharp turns.

Benefits include reduced chance of damage to the tool string, reduced rigging time and reduced chance of trapped fingers.

Line is protected on contact

Because the Phuel guide is of **lightweight design** it helps to reduce soft tissue or soft muscle type injury as it reduces lifting and straining required for rigging of a heavy steel or aluminium type entry guide.

Supplied with Lanyard to support easy handling & eliminate hazard of dropped objects.

Lanyards are certified to 10lbs / 4.5kgs SWL

Equally useful with both slickline and braided line.

The LEG is instrumental in preventing accidental hang up.

This reduces risk of; weakened cable head / socket head, or exceeding the MBL of the cable.

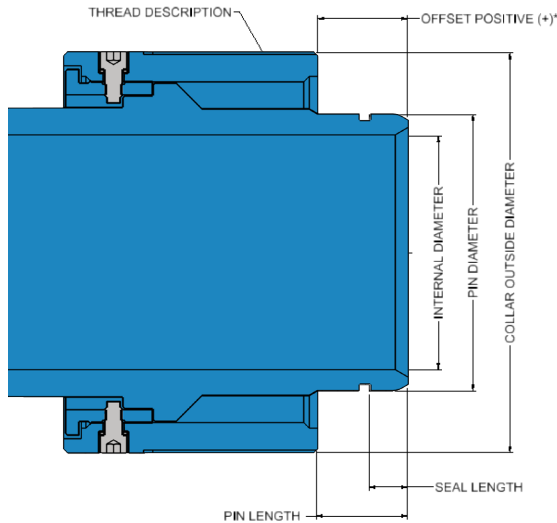

Ultimately, this protects from cable head pull-out to occur, causing the tool string to fall to ground.
